PROFESSIONAL SUMMARY

Cybersecurity enthusiast with experience in security monitoring, network analysis, and Python-based security tooling. Built practical security projects focused on web request inspection, threat detection, and vulnerability discovery. Interested in offensive security, adversarial testing, and building tools that help detect and mitigate cyber threats.

TECHNICAL SKILLS

Programming: Python, Java, SQL

Security: Threat Detection, Vulnerability Analysis, Web Security Testing

Networking: TCP/IP, Network Protocols, Port Scanning

Security Tools: Nmap, Splunk, Sysmon

Systems: Linux, Windows Event Logs

Development: REST APIs, Backend Tooling, Debugging

Tools: Git, Docker

PROJECTS

WebDefender-X – Web Security Analysis Tool

Python, Flask, Docker | GitHub: [sivadharani-a/WebDefender-X](https://github.com/sivadharani-a/WebDefender-X)

- Built a backend service that inspects HTTP requests and detects suspicious activity patterns.
- Integrated authentication, structured logging, and rule-based validation.
- Deployed the application using Docker for controlled testing environments.

Secure Port Scanner – Network Reconnaissance Tool

Python, Flask, Nmap | GitHub: [sivadharani-a/Secure-Port-Scanner](https://github.com/sivadharani-a/Secure-Port-Scanner)

- Developed a Python-based scanning tool that performs controlled port discovery.
- Processed scan results to identify exposed services and potential attack surfaces.
- Implemented secure input validation to prevent misuse of scanning operations.

AI-Assisted Log Anomaly Detection

Python, FastAPI, Scikit-learn | GitHub: [sivadharani-a/AI_log_anomaly_detection](https://github.com/sivadharani-a/AI_log_anomaly_detection)

- Engineered a backend service that analyzes system logs and detects anomalous activity patterns.
 - Built REST API endpoints to ingest log data and generate structured risk scores.
 - Applied validation and error handling to ensure reliable log processing.
-

INTERNSHIP EXPERIENCE

Cybersecurity Intern

Academor | Bangalore, Karnataka, India

March 2025 - May 2025

- Tested backend services designed to analyze web request patterns for suspicious behavior.
 - Investigated system logs and validated detection outputs.
 - Assisted debugging and documentation to improve reliability of monitoring workflows.
-

EDUCATION

Master of Computer Applications (MCA) | CGPA: 8.40

UCE-BIT Campus, Anna University - Tiruchirappalli, Tamil Nadu, India

CERTIFICATIONS

AWS Certified Cloud Practitioner

ISC2 Certified in Cybersecurity (CC) – In Progress

Google AI Essentials

Career Essentials in Generative AI – Microsoft & LinkedIn

ADDITIONAL INFORMATION

Strong analytical and investigative mindset

Interested in defensive security research and threat analysis
